Excerpt: . . . 11 Platform Technology Centers that are national resources to develop computerized state-of-the art prosthetic limbs with the goal of using the latest advances in ortho-pedic surgery, tissue engineering, nanotechnology, and microelectronics to create prosthetics that look, feel, and act more like ones own limb. The Providence VA Medical Center, in collaboration with Brown University and the Massachusetts Institute of Technology, is working to develop a biohybrid limb that will use regenerated tissue, lengthened bone, internal and external implants and sensors to allow amputees to use brain signals and residual limb musculature to have better control of their limbs and reduce the discomfort and secondary complications associated with current prostheses. These researchers are already publishing and presenting about their work. The Advanced Platform Technology (APT) Center at the Cleveland VA Medical Center focuses on sensory and implanted control of prosthetic limbs, accelerated wound healing, and biological sensors for the detection of health and function to accelerate the use of new materials and innovative micro-mechanical or nanotechnologies to provide more independence to veterans with disabilities. ORD is starting a study to gather information about how prosthetic devices are used, costs, amputee satisfaction, comparisons selected prosthetic devices, and various prosthetic procurement alternatives to help VA match technology to the needs of an individual veteran. ORD is partnering with the Department of Defense (DoD), Walter Reed Army Medical Center, the Defense Advanced Research Projects Agency and Brooks Army Medical Center to...
