Construct a circumference such that A B shall be a chord and shall cut off a segment, the angle of which shall be equal to the angle C. From A draw A F perpendicular to A B and equal to the given height. Through F draw F E parallel to A B and meeting the circumference in C. A C B is the triangle required. 5th. Let A B, Z C, and the height A D be given. Make an angle A C B = the given angle, and find in the side C A a point, A, such that its distance from C B = the given height (as in Problem 5). From A, with radius A B, describe an arc cutting C B in B, then A B C is the triangle required. 52. Construct a triangle, having given the radius of the inscribed circle, one angle, and the height taken from it. Analysis.--Suppose the problem solved, and let A B C be the triangle. Let A G be the height from A, and let O be the centre of the inscribed circle, and OD, OE, the perpendiculars from O on the sides; then AO bisects the angle A O E = the given radius, and B C is a tangent to the inscribed circle and also a tangent to the circle described with A as centre and A G as radius. Synthesis.--Make an zCAB = the given angle, and bisect...
