

## A course in electrical engineering Volume 2

Filesize: 3.73 MB

### Reviews

*The most effective book i ever read. I really could comprehended almost everything out of this published e ebook. You wont truly feel monotony at at any time of your respective time (that's what catalogs are for regarding should you ask me).*  
*(Rusty Kerluke)*

## A COURSE IN ELECTRICAL ENGINEERING VOLUME 2

[DOWNLOAD PDF](#)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 140 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: . . . the secondary and primary resistances, respectively, as a one-to-one ratio of rotor to stator turns is assumed. Line PG is then drawn. At any load current  $I_2$  (PE) is the secondary current, being equal to  $I_1 - I_0$  vectorially. EA is the energy component of the current  $I_1$ , and therefore the total power input per phase,  $P_1 = EA \times V$ . The core and friction losses  $P_c = BA \times V$  per phase. The primary copper loss  $I_1^2 R_1$ . The secondary copper loss  $I_2^2 R_2$ . The output  $P_o = DE \times V$  per phase. Draw PG parallel to PG and tangent to the circle at E. Break-down torque  $T_B = CE$  (to scale). The above diagram is drawn for but one phase of the motor. The values of power, losses, and torque must be multiplied by  $n$  if the motor has  $n$  phases. The torque scale may be found as follows: The torque is equal to a constant times the power, divided by the speed, the value of the constant depending on the units adopted. The power output per phase is  $P_o = V \times DE$ . The rotor speed  $N_2 = N(1-s)$  where  $N$  is the synchronous speed in r. p. m.  $CD = N(CE-CD) / N = 2(CE - CE)$ . The torque developed per phase  $K$  is  $CE \times V \times C_z$ . The total power per phase delivered to the rotor. The total power delivered to the rotor by  $n$  phases,  $P_2 = n \times P_o$ .
